ASSESSMENT TOOL 2 – Industry Problem Solving Task

Course Code:	CSA06	Course Title:	Design and Analysis of Algorithms
CO Assessed:	CO4: Articulation (BL4, BL5)	Assessment:	Assessment Tool 2 – Industry Problem Solving Task
Weightage:	20% of CIA	Total Marks:	100
CO4 Statement:	Solve optimization problems using dynamic programming and greedy strategies.		
Student Name:	Beffy A Shanika	Reg. No.:	192511387
Section / Batch:	2025	Date:	22/08/26

Instructions to Students

- Answer the following question. Total Marks: 100.
- Carefully analyze the given questions.
- Explain in detail with sample code if needed.
- Clearly identify all key issues.
- Provide a thorough analysis with validated results and performance evaluation.

Question Type	Focus Area	Questions
Industry Problem Solving Task	Focus on Solving optimization problems using dynamic programming and greedy strategies	Q1

SECTION A – Industry Problem Solving Task

Q1 Smart Inventory Replenishment Optimization (Dynamic Programming)

100 marks

A retail chain must determine optimal inventory replenishment schedules to minimize holding and shortage costs. Analyze how this problem can be formulated using Dynamic Programming. Identify constraints such as demand variability, storage limits, and lead times. Design a solution using recurrence relations for optimal decision-making. Discuss implementation feasibility in supply chain systems. Evaluate algorithm efficiency and scalability. Interpret performance in terms of cost savings and inventory optimization.

Code of Conduct

I Beffy A Shanika(192511387) (Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the Student: beffy

RUBRICS FOR CALCULATION**Industry Problem Solving Task**

Criteria	Weightage	Level 4 – Exemplary	Level 3 – Proficient	Level 2 – Developing	Level 1 – Beginning
Understanding of Industry Problem	20%	Comprehensive understanding of real-world problem and constraints	Good understanding with minor gaps in requirements	Basic understanding; some requirements unclear	Poor understanding; misinterprets problem context
Application of Engineering Concepts	25%	Applies advanced and relevant concepts effectively to solve the problem	Applies appropriate concepts with minor errors	Limited application of concepts	Incorrect or no application of concepts
Solution Design	25%	Innovative, practical, and feasible solution aligned with industry standards	Logical and feasible solution with minor gaps	Basic solution with limited feasibility	Unclear or impractical solution
Use of Tools	15%	Effective use of modern tools, technologies, and real data	Appropriate use of tools with correct implementation	Limited or inconsistent use of tools	Minimal or incorrect use of tools
Analysis	10%	Thorough analysis with validated results and performance evaluation	Good analysis with reasonable validation	Basic analysis with limited validation	Poor or no analysis
Professionalism	5%	Highly professional, well-documented, and clearly presented work	Good documentation and presentation	Basic documentation with some gaps	Poor documentation and presentation

Marks Evaluation:

Criteria	Wt.	Level 4 – Exemplary	Level 3 – Proficient	Level 2 – Developing	Level 1 – Beginning
Understanding of Industry Problem	20%				
Application of Engineering Concepts	25%				
Solution Design	25%				
Use of Tools	15%				
Analysis	10%				
Professionalism	5%				
Total Marks (100):

Date: _____	Date: _____	Date: _____

ANSWER:

CODE:

```
1 def inventory_dp(demand, capacity, holding, shortage):
2     n = len(demand)
3     INF = float('inf')
4     dp = [[INF] * (capacity + 1) for _ in range(n + 1)]
5     dp[0][0] = 0
6     for i in range(n):
7         for stock in range(capacity + 1):
8             if dp[i][stock] == INF:
9                 continue
10            for order in range(capacity - stock + 1):
11                available = stock + order
12                if available >= demand[i]:
13                    next_stock = available - demand[i]
14                    cost = next_stock * holding
15                else:
16                    next_stock = 0
17                    cost = (demand[i] - available) * shortage
18
19                dp[i + 1][next_stock] = min(
20                    dp[i + 1][next_stock],
21                    dp[i][stock] + cost
22                )
23     return min(dp[n])
24 n = int(input())
25 demand = list(map(int, input().split()))
